

Team McLaren Roadmap & Strategy

When creating our chassis improvements, we used our decision matrix and decided that a minimal design with robust support for the photoresistors would be the best combination of simplicity and functionality.

Decision Matrix

Block Diagram

Needs	Wants	Extras
All essential robot components	Easy access to components for maintenance	Fully protected components
Manageable and safe wiring	Light shield for photoresistors	Pretty design/appearance
Clear view for photoresistors	Balanced weight distribution	Additional photoresistors

After our initial assembly, we created our decision matrix to decide what we believed to be the key elements and create a hierarchy so that we could appropriately allocate our time.
